

# Creating a Resilient Organization for Health Care Workers

HHS Region 7 Tribal Behavioral Health Summit

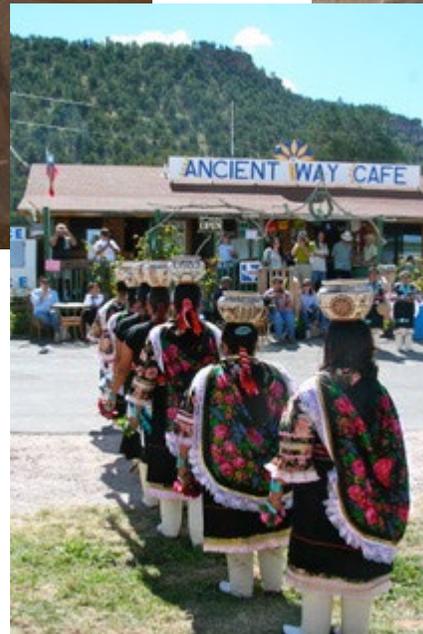

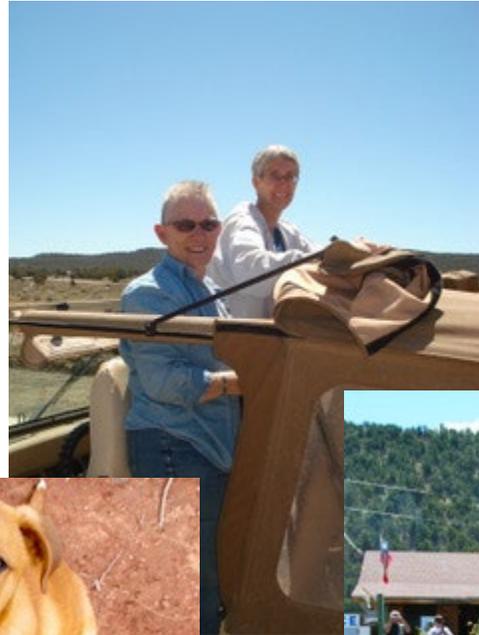

*October 26, 2022*

**CDR Sharyl Trail, PsyD**  
**Acting Regional Administrator – Region 6**  
Office of Intergovernmental and External Affairs

**Vision: Healthy Communities, Healthy People**

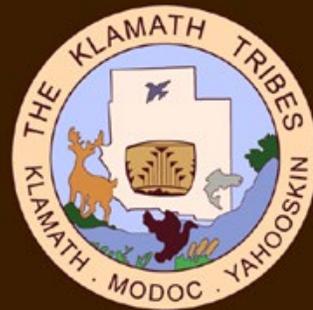

# Zuni, NM – Staff Psychologist

# Alamo Navajo, NM – BH Director/Clinician

# Klamath Tribal Health, KF OR – BH Director/Clinician

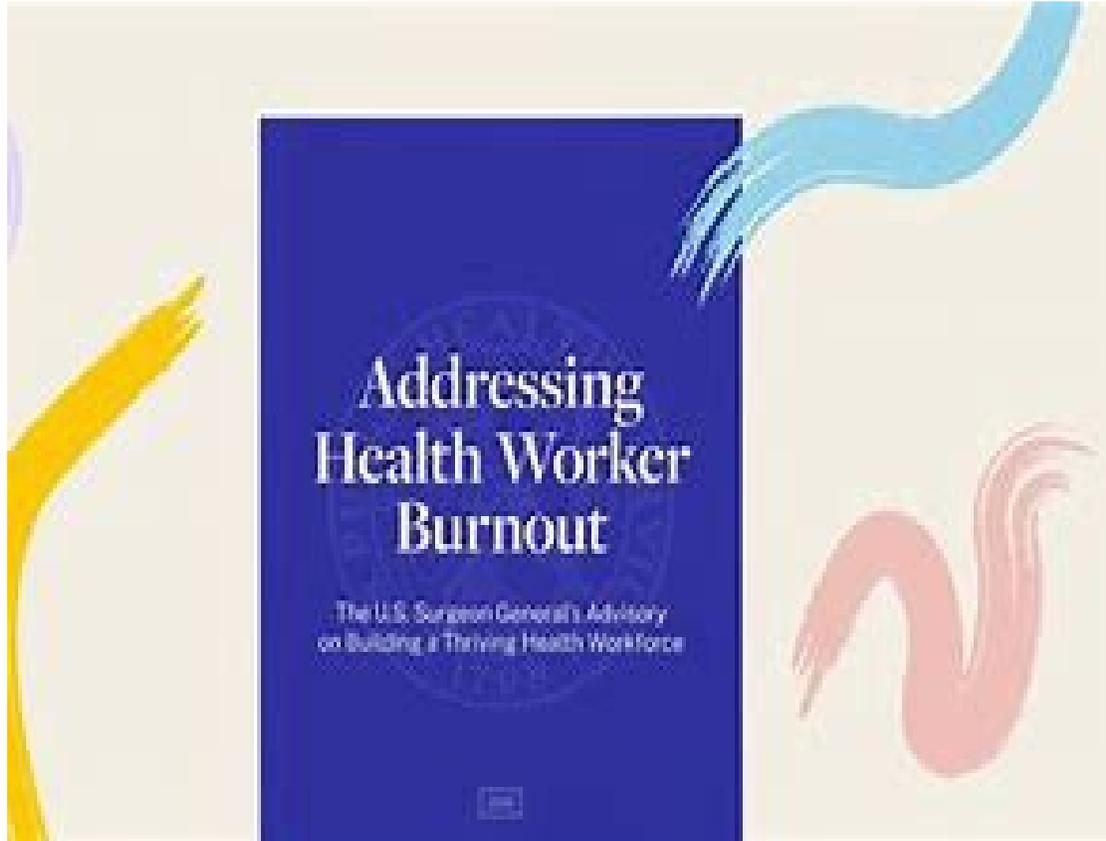

Your Integrated Care Team  
Klamath Tribal Health  
& Family Services

# Oneida Nation Green Bay, WI – Dir. Of Training/Clinician

# New Release: Surgeon General's Report

- [Health Worker Burnout — Current Priorities of the U.S. Surgeon General \(hhs.gov\)](https://www.hhs.gov)

# Burnout

---

- Burn-out is a **SYNDROME** conceptualized as resulting from **chronic workplace stress that has not been successfully managed** (World Health Organization, 2019).
- [Burn-out an "occupational phenomenon": International Classification of Diseases \(who.int\)](https://www.who.int)

**World Health  
Organization**

# Burnout: Multidimensional

---

- Characteristics of burnout include:
  - Emotional exhaustion – **Wore out** (*both physical and emotional manifestations*)
  - Depersonalization – **Checked out** (*uncaring feelings/hostility toward colleagues and patients; do least amount possible*)
  - Reduced sense of accomplishment and effectiveness – **Bummed Out**

(Maslach, 2003; Newell & MacNeil, 2010, pp. 59; Skinner, 2015, pp. 132-133; WHO, 2019)

- Burnout is the “Canary in the coal mine” – Resiliency is *NOT* about making the bird tougher.

# Areas of Worklife Survey (AWS) Maslach

- Created to assess employees' perceptions of work setting qualities that play a role in whether they experience work engagement or burnout.
- Six domains related to the work environment are assessed:
  - Workload
  - Control
  - Reward
  - Community
  - Fairness
  - Values
- Using the MBI and AWS together assists in measuring the extent and likely cause of burnout.
- [Physician Burnout Solutions - Mind Garden](#)

# Maslach Burnout Inventory (MBI)

- Measures burnout as defined by the World Health Organization (WHO) and in the ICD-11.
- Can be used to assess specific groups in addition to general use:
  - Medical personnel
  - Human service workers
  - Educators
  - Students
- Using the MBI and AWS together assists in measuring the extent and likely cause of burnout.
- [Maslach Burnout Inventory \(MBI\) - Assessments, Tests | Mind Garden - Mind Garden](#)
- [Valid and Reliable Survey Instruments to Measure Burnout, Well-Being, and Other Work-Related Dimensions - National Academy of Medicine \(nam.edu\)](#)

# Burnout Interventions “Treatment”

Assess the **severity, duration, and functional impairment** burnout is causing the organization and the employees.

## Prevention

- Primary – (Everyone)
  - HR Wellness & Resiliency Programs/Appreciation Programs
  - Ongoing QI/QA
  - Team & Leadership Building
  - D&I Programs

**Prevents ROOT CAUSE**

## Curative/Advanced Curative

- Secondary – (Team Leads/Mgmt./Staff Engagement)
  - Structural, systemic, and policy level approaches
- Tertiary – (Executive Leaders/Legal/HR)
  - Structural, systemic, and policy level approaches

**Addresses ROOT CAUSE**

## Palliative – Non Curative

- EAP/FMLA/Self-Care/Appreciation
- Improves Quality of Life
- Reduces suffering
  
- CHRONIC VS ACUTE STRESS

**Manages SYMPTOMS of Root Cause**

# Muffin Rage – Dr. Jillian Horton

- “I often speak to groups of healthcare workers about burnout, and whenever I tell this story I only half-jokingly describe the phenomenon as “muffin rage.” **Muffin rage is what we feel when there is a vast chasm between our actual needs and what another person or an institution *thinks* we need.**”
- “As a healthcare worker, I regularly see my peers on the pandemic front line explode like fireworks when management makes superficial offerings such as lunch-hour “resilience training” or providing a website link to a video on meditation as a way to compensate for overwork and related stress.”
- “The irony is that some of these approaches might actually ease our suffering, but they don’t replace our basic needs for sleep, for reasonable working conditions, for physical and psychological safety. **The offering is palliative when what we are seeking is a cure.**”
- [Op-Ed: Burned-out healthcare workers and 'muffin rage' - Los Angeles Times \(latimes.com\)](#)

WHITE PAPER

### IHI Framework for Improving Joy in Work

AN IHI RESOURCE

20 University Road, Cambridge, MA 02138 • [ihi.org](http://ihi.org)

How to Cite This Paper: Finkelstein, D., Sisson, S., Kahane, A., Landman, J., Fein, D. *IHI Framework for Improving Joy in Work*. IHI White Paper. Cambridge, Massachusetts: Institute for Healthcare Improvement; 2017. (Available at <https://www.ihi.org>)

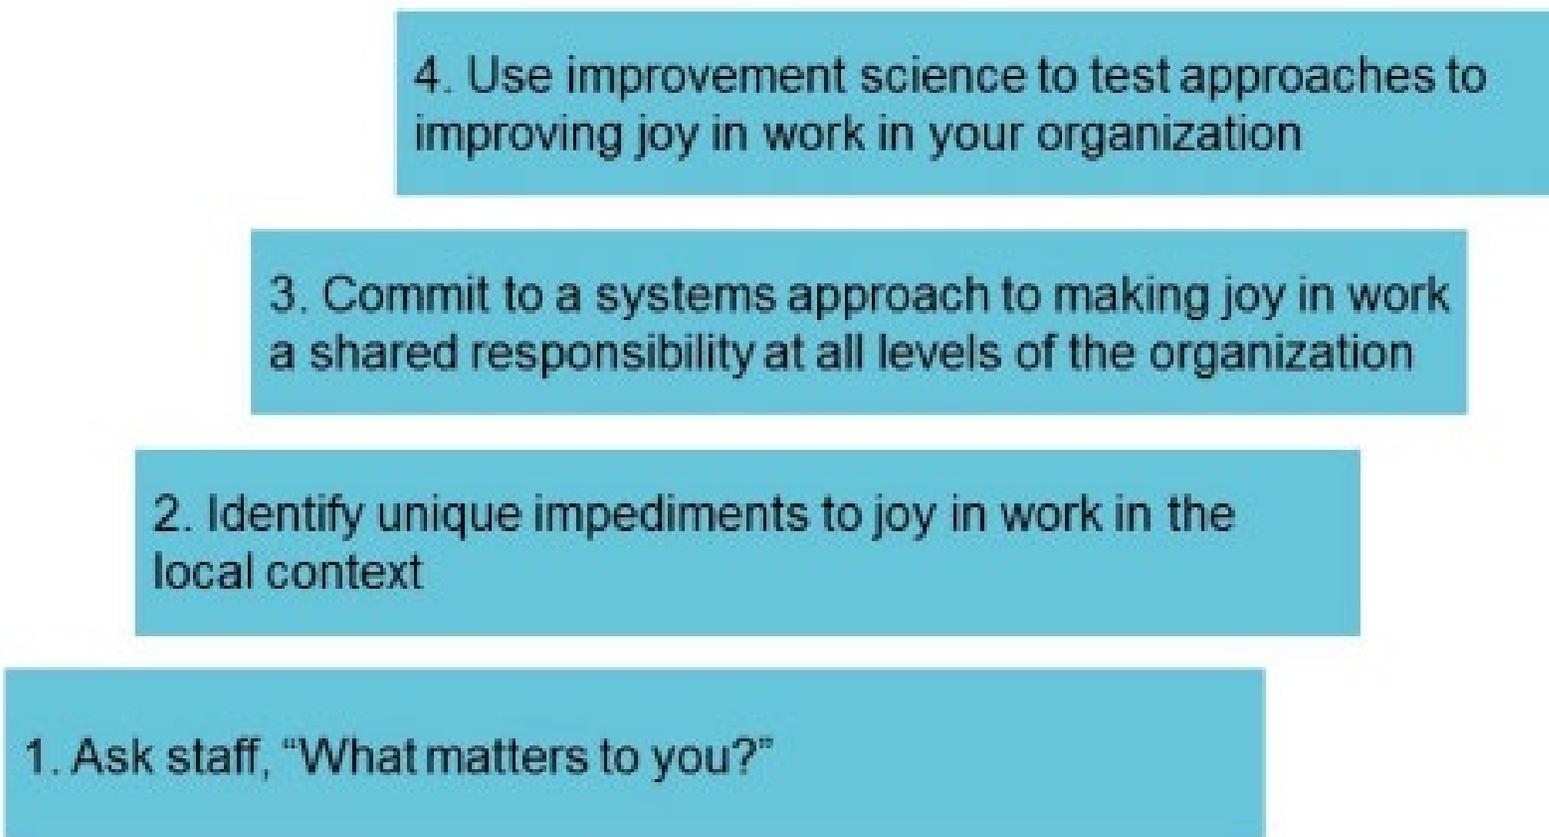

# The importance of joy in work (the “why”) – Aspirational Goal

- This assets-based approach to improvement enables people to look at issues from different perspectives, which often leads to designing more innovative solutions.
- The focus on joy in work is about **more than the absence of burnout. Joy is about connections to meaning and purpose.** By focusing on joy through this lens, health care leaders can reduce burnout, while simultaneously building the resilience health care workers rely on each day.

# Four Steps for Healthcare Leaders to Improve Employee Engagement

**Figure 1. Four Steps for Leaders**

# Step 1: Ask staff, “What matters to you?”

- Identify what contributes to, or detracts from, joy in work for staff, which will vary by individual
- By understanding what truly matters to staff, it’s possible to identify and remove barriers to joy.
- Identify the unique local and organizational opportunities to improve joy in work.
- Teams have found success with using communication boards, surveys, regular staff meetings or more informal meetings to engage, inform, and listen.
- ❓ What makes for a good day for you? ❓ What makes you proud to work here? ❓ When we are at our best, what does that look like?

# Step 2: Identify unique impediments to joy in work in the local context

- Identify frustrations they experience during the work day, the “pebbles” in their shoes
- What gets in the way of a good day? What makes for a bad day?
- Identify system-level impediments to joy in work for an organization, department, program, clinic, or team.
- Build a comprehensive understanding of what doesn't contribute to joy in work in the organization.
- Address the psychological needs of humans.
- How to address the “rocks” and “boulders”

# Step 3: Commit to a systems approach to making joy in work a shared responsibility at all levels of the organization

- Although improving the workplace is the job of leaders, everyone from senior executive leaders to clinical and administrative staff has a role to play.
- From creating effective systems to building teams to bolstering one's own resilience and supporting a positive culture, each person contributes.
- Improving joy in work is directly linked to the skills of leaders at all levels.
- Organizations cannot just delegate responsibility for joy in work to the Human Resources department; it is everyone's job.
- It is most important to note that although there is a shared responsibility, not everyone does everything.

# Step 4: Use improvement science to test approaches to improving joy in work in your organization

- Take a **systems approach** to improving joy in work. Make the change process **rewarding and effective**.
- Use the IHI Model for Improvement or another standard improvement method.
- **Teams set an aim** for their work, **decides** on measures, and **selects** components of the Framework for Improving Joy in Work as areas in which to test changes.

# IHI Joy in Work Framework – Nine Components

# IHI Nine Components to Enhance Employees' Contentment and Satisfaction with Work + AWS

- Physical and Psychological Safety
    - Community/Fairness
  - Meaning and Purpose
    - Values
  - Choice and Autonomy
    - Control
  - Recognition and Rewards
    - Reward
  - Participative Management \*
- Camaraderie and Teamwork
  - Community
- Daily Improvement
  - Workload
- Wellness and Resilience \*
- Real-Time Measurement \*
